3-Lead ECG A 3-Lead ECG uses 3 electrodes that are labeled white, black, and red. These colors are not universal as two coloring standards exist for the ECG (discussed below). These 3 leads monitor rhythm monitoring but doesn't reveal sufficient information on ST elevation activity. 5-Lead ECG. A 5-Lead ECG uses 4 limb leads and 1 chest lead.

ECG - The watch supports reading your heart rate, as part of that feature, it includes an echocardiogram (ECG). It is a single-lead ECG, which for most cases can be used to detect atrial fibrillation, and while having a 6-lead would provide more data for your doctor, it is my understanding that the single lead is enough to tell if there is a problem.
