Operant conditioning, sometimes called instrumental learning, was first extensively studied by Edward L. Thorndike (1874–1949), who observed the behavior of cats trying to escape from home-made puzzle boxes. A cat could escape from the box by a simple response such as pulling a cord or pushing a pole, but when first constrained, the cats took a long time to get out.

In general, for written multiple-choice exams, final scores are converted from raw scores (number of questions answered correctly) and placed on a scale that ranges from 0 to 100. The passing raw score (number of questions answered correctly) is determined after an exam is given and all the test results have been analyzed.

Economic analysis of law applies the tools of microeconomic theory to the analysis of legal rules and institutions. Ronald Coase [1960] and Guido Calabresi [1961] are generally identified as the seminal articles but Commons [1924] and Hale [1952] among others had brought economic thinking to the study of law in the 1910s and 1920s.
