Welwitschia is a monotypic gymnosperm genus, comprising solely the distinctive Welwitschia mirabilis, endemic to the Namib desert within Namibia and Angola.The plant is commonly known simply as welwitschia in English, but the name tree tumbo is also used. It is called kharos or khurub in Nama, tweeblaarkannedood in Afrikaans, nyanka in Damara, and onyanga in Herero.

[Welwitschia - Wikipedia](#)

Plants with more than one rooted crown may be divided and the crowns planted separately. If the stems are not joined, gently pull the plants apart. If the crowns are united by horizontal stems, cut the stems and roots with a sharp knife to minimize injury. Divisions of some outdoor plants should be dusted with a fungicide before they are replanted.

A perennial plant or simply perennial is a plant that lives more than two years. The term (per-+ -ennial, "through the years") is often used to differentiate a plant from shorter-lived annuals and biennials.The term is also widely used to distinguish plants with little or no woody growth (secondary growth in girth) from trees and shrubs, which are also technically perennials.
