I'm right now in front of a huge "Game Design" question. I'm making a pixel-art-ish game and using bilinear interpolation could solve lots of animation-issues. On the other hand, its not a "pixel-game" anymore. If I use Bilinear Interpolation the animation works but it looks "hybrid-ish" and the artstyle gets lost.

Pixel-art scaling algorithms are graphical filters that are often used in video game console emulators to enhance hand-drawn 2D pixel art graphics. The re-scaling of pixel art is a specialist sub-field of image rescaling.. As pixel-art graphics are usually in very low resolutions, they rely on careful placing of individual pixels, often with a limited palette of colors.
