Electrocardiography is the process of producing an electrocardiogram (ECG or EKG). It is an electrogram of the heart which is a graph of voltage versus time of the electrical activity of the heart using electrodes placed on the skin. These electrodes detect the small electrical changes that are a consequence of cardiac muscle depolarization followed by repolarization during each cardiac cycle ...

However, isolated posterior MI, while less common (3-11% of infarcts 2), is important to recognize as it is also an indication for reperfusion and can be missed by the ECG reader. ECG findings: The ECG in posterior STEMI is first characterized by ST-depression in the anterior leads. The ST depression is often deep (>2mm) and flat (horizontal). 3
