Terminology and etymology. Male rabbits are called bucks; females are called does. An older term for an adult rabbit used until the 18th century is coney (derived ultimately from the Latin *cuniculus*), while rabbit once referred only to the young animals. Another term for a young rabbit is bunny, though this term is often applied informally (particularly by children) to rabbits generally ...

I had to refer to the beef/lamb dissection. The pictures aren't clear enough to discern connective tissue, sinew, etc. I believe since the book is 'Basic Butchering of Livestock and Game' and not a 'cook book', perhaps more detail should have been given to the dissection of the primal cuts into recognizable meat counter type cuts and then it wouldn't have been so 'basic'.

Fish can also have disruptive markings to hide body parts. Species such as the jackknife fish (*Equetus lanceolatus*), high-hat (*Equetus acuminatus*) and some angel fishes (*Pomacanthidae*), have dark lines that run through the eyes. These lines may serve to hide the eyes so that other animals can not tell where the fish is looking or even if it is a fish.
